Company Profile

Kwish Technologies Limited builds and integrates artificial intelligence for organisations operating in African markets and beyond. We combine AI tools for speed with senior human developers for judgment, and we study what works in Western and global AI markets before adapting it for African operating conditions.

In one paragraph

Kwish designs, builds, and integrates AI systems and digital infrastructure. We serve enterprises, government institutions, telecommunications operators, mining companies, farms, hospitals, energy utilities, schools, banks, and small businesses. We operate from Kampala, Nairobi, Stockholm, and Toronto, and we train business teams on AI through our partner Yiga AI.

C O M P A N Y

01

Who We Are

Kwish Technologies Limited is a technology delivery company. We do not sell AI as a concept. We scope a defined problem, build the system that solves it, integrate that system into the client's existing operations, and stay accountable for it after launch.

Our founding premise is simple. Most AI product thinking is built for markets with reliable power, deep broadband, and mature enterprise software stacks. African organisations operate under different constraints: intermittent connectivity, legacy systems, multilingual user bases, and tighter oversight from boards, regulators, and the public. We study proven AI approaches from global markets and rebuild them for these conditions rather than importing them unchanged.

What this means in practice

- Systems are designed offline-first and mobile-first from the outset, not patched afterward.
- Every engagement includes a documented handover so client teams can run the system without permanent dependence on us.
- Senior developers own architecture and judgment calls; AI tools accelerate the repetitive parts of build and testing.
- We propose the simplest system that solves the problem, not the most technically ambitious one.

Where we operate

Office	Role
Kampala, Uganda	Regional headquarters and primary East Africa delivery hub.
Nairobi, Kenya	Client engagement and delivery for the East Africa corridor.
Stockholm, Sweden	Product engineering and European partner relationships.
Toronto, Canada	North American partnerships and advisory relationships.

SERVICES

02 What We Deliver

Our work spans strategy, integration, engineering, and training. Each engagement fits into one of the following delivery lines. A full brochure on each service is available as a companion document.

Service line	Core focus
AI Strategy and Transformation	Readiness assessment, roadmap, and phased implementation
Enterprise AI Integration	Connecting AI into ERP, CRM, and operational workflow
Government and Public Sector AI	Compliance-first systems built for public accountability
Data Infrastructure and Engineering	Warehousing, pipelines, and governance
AI Training and Capability Building	Executive briefings through practitioner bootcamps
Digital Product Development	Web and mobile products built for African users
Cyber Security	Risk assessment, architecture, hardening, monitoring
Blockchain Solutions	Feasibility, smart contracts, and pilot deployment
App, Web, and Mobile Development	Production applications and websites
Software Development	Custom systems delivered as documented, owned assets
Data Analytics	Dashboards, reporting, and decision support
DevOps and Cloud	CI/CD, cloud migration, and reliability engineering
AI Classes for Business	Cohort training delivered with partner Yiga AI

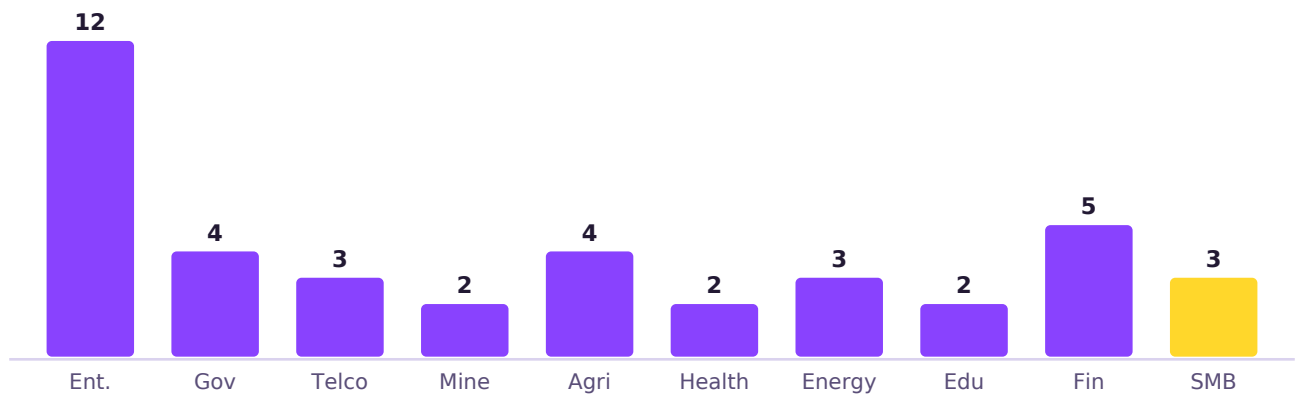

INDUSTRIES

03 Sectors We Serve

We work across ten sectors. Each sector has its own regulatory constraints, data patterns, and connectivity conditions, and our systems are scoped around those specifics rather than a generic template.

- Enterprises and large organisations
- Government and public sector institutions
- Telecommunications
- Mining
- Farming and agriculture
- Healthcare
- Energy
- Education
- Financial institutions
- Small businesses

HOW WE WORK

04 Delivery Model

Every engagement runs on the same operating principle: AI tools handle speed, senior human developers handle judgment. AI accelerates drafting, testing, and repetitive engineering. Senior developers own architecture decisions, client conversations, security review, and final sign-off before anything reaches production.

Three ways to engage

Assessment and Roadmap for boards needing a diagnostic and a phased plan. Build and Deploy for a defined transformation initiative with milestone-based delivery. Embedded AI Partner for organisations that want continuous AI capability across multiple use cases over time.

A companion document, How We Work, sets out the full engagement process from first contact through discovery, build, deployment, training, and support, with a visual timeline.

PARTNERS

05 Partner Ecosystem

Kwish maintains a small number of deep partnerships rather than a long list of shallow ones.

Yiga AI (yigaai.com)	Our training arm delivers AI classes for businesses through the Yiga AI learning platform. Cohorts run live, using each client's own documents and workflows, and every cohort ships one working automation before the programme closes.
Cloud and infrastructure partners	We deploy on major cloud providers and select regional infrastructure partners to satisfy data localisation requirements where they apply.
Sector specialists	For deep domain work in healthcare, mining, and financial services, we bring in vetted subject-matter specialists to review clinical, safety, or regulatory decisions.

Why organisations choose Kwish

- We deliver working systems, not slide decks. Every engagement ends in something running in production.
- We document everything. Client teams receive runbooks, architecture diagrams, and training, not a black box.
- We understand African operating conditions because we build for them daily, not as an afterthought.
- We keep engagement teams small and senior, which shortens decision cycles and keeps accountability clear.
